

LIONS LIGHT ACADEMY

Where Everything Lives

The handover map — files, backups, and how to change anything

“It is the glory of God to conceal a matter, but the glory of kings is to search it out.”

PROVERBS 25:2

EFFECTIVE

September 2026

DOCUMENT

Updated 18 September 2026

Everything is now in git. The markdown sources and the build pipeline live in the repository alongside the site. Clone it and you have the whole thing.

Read this first

Four things explain most of how LLA works:

- 1. **Every branded PDF is generated from a markdown file by a script.** Nothing is hand-made in a design tool. To fix a typo you edit the markdown and re-run the build — you never edit a PDF.
- 2. **The website is a folder of files in git.** Push to GitHub and Cloudflare publishes it about a minute later. There is no CMS and no admin login.
- 3. **Anything inside `site/` is public the moment it is pushed,** whether or not a page links to it. `/kit/` is unlisted, not private.
- 4. **The co-op's own Google account is `lionslightacademy2025@gmail.com`** . Classes, forms and completed paperwork belong to that account, not to a personal one.

The website

Live site	https://lions-light-academy.pages.dev/
Staff kit (unlisted)	https://lions-light-academy.pages.dev/kit/
Source on disk	<code>~/Documents/Claude/Projects/lla/site/</code>
GitHub	<code>github.com/damianbrockway-wq/lions-light-academy</code>
Hosting	Cloudflare Pages, deploys automatically on push to <code>main</code>

Publishing a change

```
cd ~/Documents/Claude/Projects/lla/site
git add -A
git commit -m "what changed"
git push
```

Live in about a minute. No other step.

How the site is organised

PATH	WHAT IT IS
site/index.html	The entire public site — one file. Resource cards live in #libraryGrid
site/docs/	Every public PDF families and teachers can reach
site/kit/	Unlisted staff printables — see below
site/_headers	Cloudflare rules: forces downloads on fillable PDFs, noindex on /kit/
site/robots.txt	Tells search engines to skip /kit/ , /sources/ and /pipeline/
site/sources/	Every markdown source. In git, so the documents have history
site/pipeline/	Every build script. In git, minus the ID card template — see below

The resource cards

Cards are filtered by a data-category attribute — family , teacher , policy , curriculum , video , maine . The tab buttons carry matching data-lib values. To add a document to the Families tab, the card needs data-category="family" .

The grid shows 8 cards and then a Show all button, so position matters: put important things high.

The staff kit

<https://lions-light-academy.pages.dev/kit/> — on disk at site/kit/

Nothing on the site links to it and search engines are told to skip it. **It is unlisted, not private** — anyone with the address can open it. Never put rosters, family contact details or completed forms in there.

FILE	WHAT IT IS
cleanup-cards-laminate.pdf	8 cards, one per landscape page, bordered — the set to print and laminate
cleanup-cards-two-up.pdf	Same 8 cards, two per page with cut lines
cleanup-cards-full-page.pdf	Same 8 cards, one per page, no border
first-day-run-sheet.pdf	The reusable blank template — whole day in clock order
first-day-run-sheet-template.pdf	Same file, kept under both names
shed-attendance.pdf	Fire-route headcount — 23 students, 6 adults, spare lines
incident-report.pdf	Blank incident form
warning-record.pdf	Blank Moderate-concern warning form
supply-fee-receipts-001-009.pdf	Payment log + 7 pre-numbered receipts + 2 spares
teacher-id-standard.pdf / -small.pdf	Teacher ID cards, two sizes
teacher-id-blank-template.pdf	For adding a teacher

Completed forms never go here. A filled incident report names a child and their injury. Those live on your own machine, outside the repo.

Public documents

All at `site/docs/` , all reachable at `https://lions-light-academy.pages.dev/docs/<filename>` .

Families

DOCUMENT	FILE
Registration & Enrollment	registration-enrollment.pdf
Parent Packet v3.1	parent-packet.pdf
Supply List	supply-list.pdf
Your First Day	your-first-day.pdf
Code of Conduct v1.2	code-of-conduct.pdf
Student Pledge	student-pledge.pdf
Google Classroom — Families	classroom-family-guide.pdf
Co-op Day Schedule	coop-day-schedule.pdf
Field Trip Waiver	field-trip-waiver.pdf
Supply Fee Receipt (blank)	supply-fee-receipt.pdf
HS Credit Summary	hs-credit-summary.pdf
Maine Homeschool Checklist	maine-homeschool-checklist.pdf

Teachers

DOCUMENT	FILE
First Day Run-Through	first-day-run-through.pdf
First Day Run Sheet	first-day-run-sheet.pdf
When You Can't Be There (absence & cover)	teacher-absence-plan.pdf
Teacher & Mentor Guidebook v2.0	teacher-guidebook.pdf
Teacher & Volunteer Expectations v2.0	teacher-volunteer-expectations.pdf
Setting Up Your Google Classroom v1.3	classroom-setup-guide.pdf
Supervision & Room Operations SOP v1.1	supervision-sop.pdf
Technical Operations Handbook	technical-operations.pdf

Safety and policy

DOCUMENT	FILE
Student Safety & Emergency Plan v1.3	safety-emergency-plan.pdf
Escalation & Discipline Policy v1.2.1	discipline-policy.pdf

How a document gets made

You never edit a PDF. Every branded document is built from markdown.

Markdown sources	site/sources/ — in git. Also at ~/Documents/Claude/Projects/lla/DRAFT_*.md
The build pipeline	site/pipeline/ — in git. Also lla-build-kit-2026-09-18.tar.gz , which additionally has the fonts, logos and the ID card template

To change a document

1. Edit the matching `DRAFT_*.md`
2. Run `python3 brand/build.py` from the unpacked kit
3. Copy the new PDF into `site/docs/`
4. Commit and push

Which source makes which PDF

SOURCE	OUTPUT
<code>DRAFT_Code_of_Conduct_v1.2.md</code>	<code>code-of-conduct.pdf</code>
<code>DRAFT_Escalation_Discipline_Policy_v1.2.md</code>	<code>discipline-policy.pdf</code>
<code>DRAFT_Parent_Packet_v3.md</code>	<code>parent-packet.pdf</code>
<code>DRAFT_Safety_Emergency_Plan_v1.3.md</code>	<code>safety-emergency-plan.pdf</code>
<code>DRAFT_Supervision_SOP_v1.1.md</code>	<code>supervision-sop.pdf</code>
<code>Teacher_Guidebook_2026_DRAFT.md</code>	<code>teacher-guidebook.pdf</code>
<code>DRAFT_Teacher_Volunteer_Expectations_v2.0.md</code>	<code>teacher-volunteer-expectations.pdf</code>
<code>DRAFT_Classroom_Setup_Guide.md</code>	<code>classroom-setup-guide.pdf</code>
<code>DRAFT_Classroom_Family_Guide_v1.0.md</code>	<code>classroom-family-guide.pdf</code>
<code>DRAFT_First_Day_Run_Through.md</code>	<code>first-day-run-through.pdf</code>
<code>DRAFT_Teacher_Absence_Plan_v1.0.md</code>	<code>teacher-absence-plan.pdf</code>
<code>DRAFT_Your_First_Day_v1.0.md</code>	<code>your-first-day.pdf</code>
<code>DRAFT_Supply_List_v1.0.md</code>	<code>supply-list.pdf</code>
<code>DRAFT_Technical_Operations.md</code>	<code>technical-operations.pdf</code>

The printables are built differently

These are laid out in code rather than markdown, in the kit's `cards/` and `brand/` folders:

SCRIPT	MAKES
<code>cards/build_set.py + stamp_full_set.py</code>	Cleanup cards, one per page
<code>cards/build_framed.py</code>	Cleanup cards, bordered for lamination
<code>cards/build_two_up.py</code>	Cleanup cards, two per page with cut lines
<code>cards/build_assignments.py</code>	The "where do I go after my last class" cover
<code>cards/build_run_sheet.py</code>	First day run sheet — builds the dated sheet and the blank template from one source
<code>cards/build_shed_attendance.py</code>	Fire-route headcount
<code>cards/build_records.py</code>	Incident report and warning record
<code>cards/build_student_conduct.py</code>	Student pledge
<code>cards/build_prayer.py</code>	Opening prayer
<code>brand/build_schedule.py</code>	The daily schedule — asserts the arrival times before it writes
<code>brand/build_receipt_run.py</code>	Pre-numbered supply fee receipts. <code>python3 build_receipt_run.py 12 10</code> = twelve starting at 010
<code>brand/build_ids_scaled.py + stamp_id_cutlines.py</code>	Teacher ID cards at either size

Installing the pipeline on a new machine

```
tar xzf lla-build-kit-2026-09-18.tar.gz
pip install markdown playwright pypdf reportlab pillow --break-system-packages
playwright install chromium
```

Changing something that appears in several places

This is the section that saves you. Most LLA facts live in more than one document, and the copies do not find each other.

The rule: search the sources, never the PDFs. A PDF is output. Change the source and rebuild, or your fix lasts until the next build and then vanishes.

Where to search

```
cd ~/Documents/Claude/Projects/lla
grep -rn "the thing you are changing" DRAFT_*.md *.md
grep -n "the thing you are changing" site/index.html
```

Then the same search in the unpacked build kit, because three documents are built from HTML rather than markdown:

```
grep -rn "the thing" brand/form_body.html brand/schedule_page.html brand/teacher_id.html
```

Those three catch people out. The registration form, the daily schedule and the teacher ID cards have no `DRAFT_*.md` — looking only in markdown will tell you a fact appears nowhere when it appears three times.

Worked example — changing the supply fee

Verified 18 September 2026. Every place `$200` actually appears:

FILE	WHAT IT SAYS	HOW TO CHANGE IT
DRAFT_Parent_Packet_v3.md	"one supply fee per family, per year — \$200, waived for families who lead a class"	Edit, run <code>brand/build.py</code> , copy <code>parent-packet.pdf</code> to <code>site/docs/</code>
brand/form_body.html	"Co-teaching, volunteering, or admin support — \$200 due"	Edit, run <code>brand/build_form.py</code> , copy <code>registration-enrollment.pdf</code> to <code>site/docs/</code>
site/index.html	Sponsor a Student: "\$200 covers one student's supplies for the year"	Hand-edit the page. It's prose, not just a number — reread the sentence

About ten minutes. Do not touch `LLA_MASTER_EXTRACT.md` or `LLA_Extract_2026-08.md` — archived research, published nowhere.

The **Supply Fee Receipt** deliberately has no amount printed on it; you write the figure in. That is why this is a ten-minute job and not an afternoon.

Blast radius for the other things that change

Counts verified 18 September 2026.

IF YOU CHANGE...	MARKDOWN SOURCES	HTML TEMPLATES	<code>SITE/INDEX.HTML</code>
The supply fee	Parent Packet	<code>form_body.html</code>	2 mentions
Arrival time	First Day Run-Through, Parent Packet, Your First Day	<code>schedule_page.html</code>	2 mentions
The co-op email	Classroom Family Guide, Parent Packet, Supply List, Your First Day, Technical Operations	<code>teacher_id.html</code>	4 mentions
The web address (own domain)	Parent Packet	<code>form_body.html</code> , <code>teacher_id.html</code>	3 mentions
A teacher leaving or joining	—	<code>teacher_id.html</code>	Damian ×3, Ginny ×1 — no other teacher is named on the site
The school year	Technical Operations	every template's footer	14 mentions

The school year is the big one — it is stamped on nearly every document by `build.py` 's `DOCS` list rather than written in the markdown. Change it there once and every document picks it up on rebuild.

After any change, check three things

1. Read the rendered PDF, not the script output. A build can report success and change nothing — see the `\u2013` trap below
2. Search again for the old value. If it still appears anywhere but the archives, you missed a copy

3. **Push**, and open the live page. Cloudflare takes about a minute

What this file can and cannot rebuild

Read this before you rely on it. This handbook is a map, not a backup. It tells you where everything is and how it is made. It does not contain the things themselves.

WITH...	YOU CAN REBUILD
This file alone	Nothing. You would know exactly what to do and have no material to do it with
This file + GitHub	Everything. Site, images, PDFs, every markdown source, the whole build pipeline, and every past version
The build kit tarball	Every document from source, plus the teacher ID cards — which are the one thing not in git

What is not in this handbook

- `index.html` — 114 KB, the entire public website. This file describes its structure; it does not contain it
- **28 image files** — gallery photos, logos, favicons, social preview
- **The Google Calendar embed ID**
- **Cloudflare's settings** — which repository, which branch

All of the above are in GitHub. **That is the backup. This is the instructions.**

The one thing deliberately kept out of git

`brand/teacher_id.html` is 9.4 MB because it embeds **photographs of real teachers**. Everything in the repository is published publicly the moment it is pushed, so that file is kept out on purpose.

It lives only in the local build kit tarball. `build_ids_scaled.py` and `stamp_id_cutlines.py` are in the repo and will work as soon as `teacher_id.html` is placed beside them from the tarball. There is a note in `pipeline/` saying so.

Every document now has a source

As of 18 September 2026, all 22 public documents can be rebuilt. The last two holdouts — `hs-credit-summary.pdf` and `maine-homeschool-checklist.pdf` — were PDFs and nothing else, carried over from

2025. Both now have markdown sources in `sources/` , and both were rebuilt in the brand style in the process.

Where the files are on disk

Everything lives under `~/Documents/Claude/Projects/lla/` .

FOLDER	WHAT'S IN IT
<code>site/</code>	The website. This is the one that matters — it's in git
<code>pdf-2026/</code>	Working copies of every current PDF, plus teacher ID cards
<code>pdf-2026/cards/</code>	Individual teacher ID cards, one per person
<code>cleanup-cards/</code>	The cleanup card set in all three layouts
<code>id-template/</code>	Blank ID card template and its README
<code>docs/</code>	Historical. 2025-era documents and original photos. Nothing current
<code>_retired/</code>	Superseded documents kept for reference — do not publish these
<code>_to_delete/</code>	Staging area for things being removed. Safe to empty
<code>_site-backups/</code>	Copies of <code>index.html</code> from before major redesigns

Backups — what exists and what doesn't

Be honest with yourself about this section. It is the part most likely to matter and least likely to be checked.

WHAT	WHERE	COVERS
The website, all history	GitHub — <code>github.com/damianbrockway-wq/lions-light-academy</code>	Every version of every file ever pushed. This is the real backup
The build pipeline	<code>lla-build-kit-2026-09-18.tar.gz</code>	All 19 build scripts, fonts, logos, and every markdown source
Older pipeline	<code>lla-build-kit.tar.gz</code> (Aug 29), <code>build-pipeline.tar.gz</code>	Superseded. Missing the run sheet, records, schedule and receipt builders
Site redesign history	<code>_site-backups/</code>	Five older <code>index.html</code> versions
Superseded documents	<code>_retired/</code>	Old enrollment form, policy index, training acknowledgment

What is NOT backed up

- **The markdown sources are only in one place** — the project folder. They are not in git. If that folder is lost, every document has to be rewritten from its PDF. **Putting `DRAFT_*.md` into the git repo would fix this in one commit** and is the single best thing you could do for resilience.
- **Google Classroom, Drive and the calendar** live in `lionslightacademy2025@gmail.com` . No local copy.
- **Completed paperwork** — registrations, signed pledges, receipts — wherever you filed them. Not in any system described here.

Accounts and who owns what

Co-op Google account	<code>lionslightacademy2025@gmail.com</code> — classes, forms, calendar, completed paperwork
GitHub	<code>damianbrockway-wq</code>
Hosting	Cloudflare Pages, connected to the GitHub repo
Calendar	Google Calendar, embedded on the homepage. This is the authoritative schedule — the Parent Packet says so to families

Google Classroom invitations exist only in email. Nothing appears inside Classroom until the invitation is accepted from the inbox. A teacher or student seeing an empty Classroom almost always has an unaccepted invite, or is signed into the wrong Google account.

The shape of a co-op day

Every Tuesday, 15 September 2026 to 11 May 2027.

Teachers arrive	8:30
Students arrive	8:45
Arrival + Worship	8:45 – 9:00
Classes	9:00 onward — block lengths differ by age track
Lunch, whole school	11:50 – 12:30
Last class	12:30 – 1:30
Cleanup + Examen	1:30 – 1:45
Dismissal	1:45

Rooms: **Gray** (High School), **Yellow** (Middle School), **Main** (Elementary), plus hallways, entryway, two bathrooms and the teacher lounge.

Cleanup leads — Gray: Damian · Yellow: Erika · Main Room & Hallways: Jess & Ginny · Boys Bathroom: Damian · Girls Bathroom: Erika · Teacher Lounge & Outside: Leah · Final Walkthrough: Damian.

Vacuum route: Yellow → Gray → Main Room (entryway rug) → supply closet. One route, no waiting. Everywhere else is swept.

Emergency roles — Incident Lead: Damian or Ginny (both paramedics) · Calls 911: Erika · Contacts parents: Savannah. Fire meeting point is the shed behind the building, and attendance is taken there.

Things that will bite you

Anything in `site/` is public once pushed. Unlisted is not private.

The parent portal password is in the page source. `index.html` contains `const PARENT_PASSWORD='lionslight2026'`. Anyone who views source can read it. Treat everything behind it as public.

`build.py` stores some punctuation as escape sequences (`-` rather than the character). A find-and-replace using the real character silently misses. Always confirm a version change by reading the rendered PDF.

Running git through the Claude desktop bridge leaves a stale `.git/index.lock`, which blocks the next commit with a confusing error. Delete it if git complains.

Money runs through a personal account until LLA has its own. The co-op halves of the supply fee receipts and the payment log are the only record that it was the co-op's money. Keep them together.

Still outstanding

- **Adult Screening Standard** is still a draft. The Parent Packet and Safety Plan both promise background checks; the standard behind that promise was never published
 - **Enrollment form is still titled 2025–2026**
 - **No who's-who for families.** Not one teacher is named anywhere families can see
 - **First Day Run-Through says teachers arrive 8:15.** It's 8:30
 - **Insurance in writing** from the host church. LLA is an unaffiliated outside group
 - **Maine nonprofit filing** → EIN → bank account → 1023-EZ
 - **Own domain.** Still on `.pages.dev`, which is baked into the ID cards and several documents
 - **Teacher ID photos** for Leah and Jess
-
